World-Wide Smartphone Sales (In Million Units)

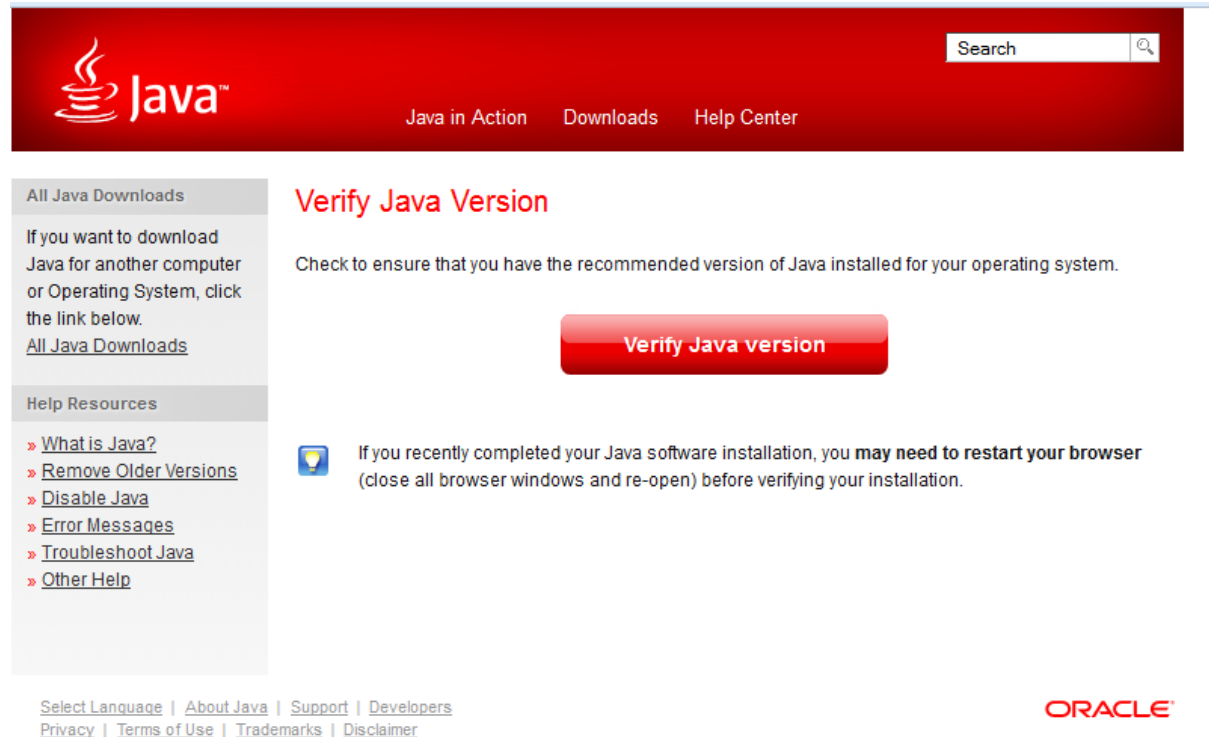

Source: Smartphone Sales, by operating system, Q1 2009-Q3 2013 <http://www.statista.com/statistics/266219/global-smartphone-sales-since-1st-quarter-2009-by-operating-system/>

Installation Requirements

- ① Java Runtime Environment (JRE)
- ② Java Development Kit (JDK)
- ③ Android Developer Tools Bundle (ADT Bundle)
 - Eclipse + ADT plugin
 - Android SDK Tools
 - Android Platform-tools
 - The latest Android platform
 - The latest Android system image for the emulator

Verify Java Version

<http://www.java.com/en/download/installed.jsp>

The screenshot shows the Java website's 'Verify Java Version' page. The header is red with the Java logo on the left and a search bar on the right. Navigation links for 'Java in Action', 'Downloads', and 'Help Center' are in the center. The main content area has a red background with the title 'Verify Java Version' in red. Below the title is a paragraph: 'Check to ensure that you have the recommended version of Java installed for your operating system.' A large red button with the text 'Verify Java version' is centered. To the left of the button is a light blue icon of a computer monitor. Below the icon is a paragraph: 'If you recently completed your Java software installation, you **may need to restart your browser** (close all browser windows and re-open) before verifying your installation.' On the far left, there is a sidebar with two sections: 'All Java Downloads' and 'Help Resources'. The 'All Java Downloads' section contains a paragraph: 'If you want to download Java for another computer or Operating System, click the link below.' followed by a link 'All Java Downloads'. The 'Help Resources' section contains a list of links: '» What is Java?', '» Remove Older Versions', '» Disable Java', '» Error Messages', '» Troubleshoot Java', and '» Other Help'. At the bottom of the page, there are links for 'Select Language', 'About Java', 'Support', 'Developers', 'Privacy', 'Terms of Use', 'Trademarks', and 'Disclaimer'. The Oracle logo is in the bottom right corner.

Java SE Runtime Environment 7 Downloads

Do you want to run Java™ programs, or do you want to develop Java programs? If you want to run Java programs, but not develop them, download the Java Runtime Environment, or JRE™.

If you want to develop applications for Java, download the Java Development Kit, or JDK™. The JDK includes the JRE, so you do not have to download both separately.

Java SE Development Kit 7 Downloads

Thank you for downloading this release of the Java™ Platform, Standard Edition Development Kit (JDK™). The JDK is a development environment for building applications, applets, and components using the Java programming language.

The JDK includes tools useful for developing and testing programs written in the Java programming language and running on the Java platform.

Looking for JavaFX SDK?

JavaFX SDK is now included in the JDK for Windows, Mac OS X, and Linux x86/x64.

Get the Android SDK

The Android SDK provides you the API libraries and developer tools necessary to build, test, and debug apps for Android.

If you're a new Android developer, we recommend you download the ADT Bundle to quickly start developing apps. It includes the essential Android SDK components and a version of the Eclipse IDE with built-in **ADT (Android Developer Tools)** to streamline your Android app development.

With a single download, the ADT Bundle includes everything you need to begin developing apps:

- Eclipse + ADT plugin
- Android SDK Tools
- Android Platform-tools
- The latest Android platform
- The latest Android system image for the emulator

If you prefer to use an existing version of Eclipse or another IDE, you can instead take a more customized approach to installing the Android SDK. See the following instructions.

▾ [USE AN EXISTING IDE](#)

File -> New -> Android Application Project

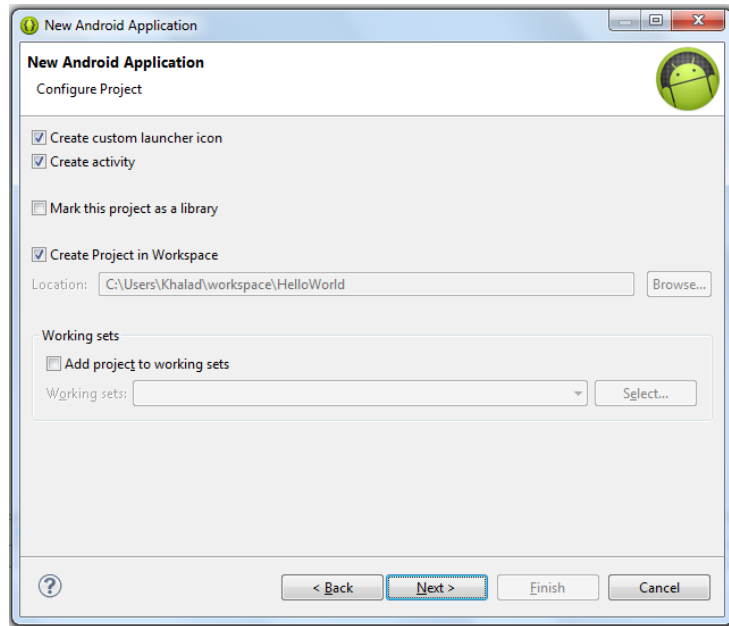

The screenshot shows the 'New Android Application' dialog box. It has a title bar with a green Android icon and the text 'New Android Application'. Below the title bar, the text 'New Android Application' is displayed in bold, followed by 'Creates a new Android Application'. On the right side, there is a green Android robot icon. The dialog contains several input fields and dropdown menus:

- Application Name: HelloWorld
- Project Name: HelloWorld
- Package Name: com.khalad.helloworld
- Minimum Required SDK: API 8: Android 2.2 (Froyo)
- Target SDK: API 17: Android 4.2 (Jelly Bean)
- Compile With: API 17: Android 4.2 (Jelly Bean)
- Theme: Holo Light with Dark Action Bar

Below these fields, there is a lightbulb icon and a paragraph of text: 'Choose the highest API level that the application is known to work with. This attribute informs the system that you have tested against the target version and the system should not enable any compatibility behaviors to maintain your app's forward-compatibility with the target version. The application is still able to run on older versions (down to minSdkVersion). Your application may look dated if you are not targeting the current'.

At the bottom, there is a question mark icon on the left and four buttons: '< Back', 'Next >', 'Finish', and 'Cancel'.

Folder Structure For Android Project

Src Folder (Source folder) – contains the java code of the application.

```
package com.khalad.helloworld;

import android.os.Bundle;

public class MainActivity extends Activity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
    }

    @Override
    public boolean onCreateOptionsMenu(Menu menu) {
        // Inflate the menu; this adds items to the action bar if it is present.
        getMenuInflater().inflate(R.menu.activity_main, menu);
        return true;
    }
}
```

Folder Structure For Android Project

gen Folder: contains java files generated by ADT

These files have references to various resources placed in the application.

It contains a special class 'R' which contains all these references.

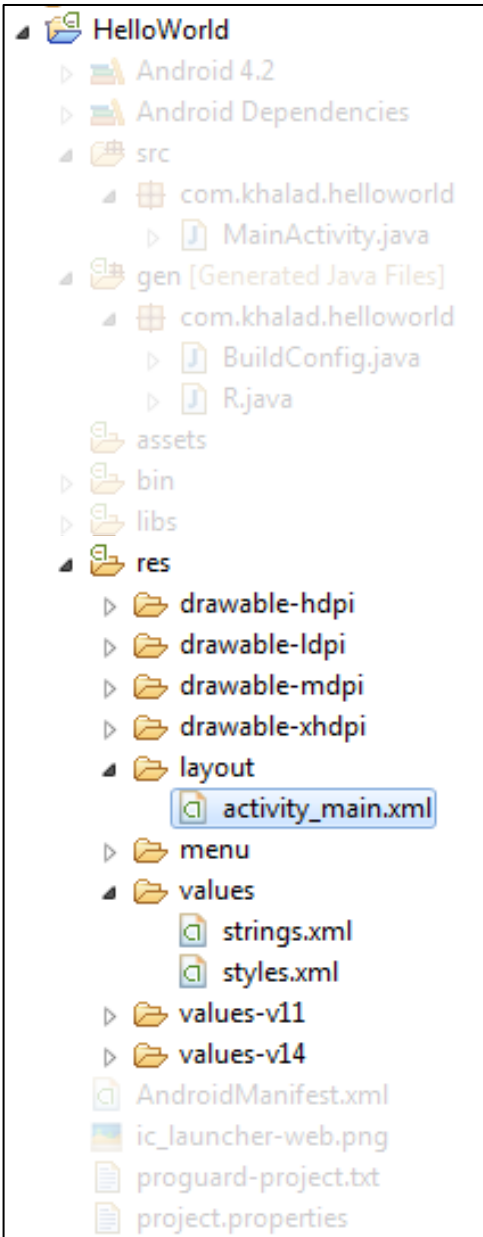

```
/* AUTO-GENERATED FILE. DO NOT MODIFY.

package com.khalad.helloworld;

public final class R {
    public static final class attr {
    }
    public static final class drawable {
        public static final int ic_launcher=0x7f020000;
    }
    public static final class id {
        public static final int menu_settings=0x7f070000;
    }
    public static final class layout {
        public static final int activity_main=0x7f030000;
    }
    public static final class menu {
        public static final int activity_main=0x7f060000;
    }
    public static final class string {
        public static final int app_name=0x7f040000;
        public static final int hello_world=0x7f040001;
        public static final int menu_settings=0x7f040002;
    }
}
```

Folder Structure For Android Project

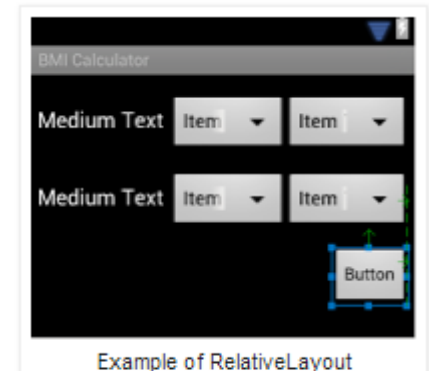

res Folder (Resource folder): Contains application resources, such as drawable files, layout files, and string values

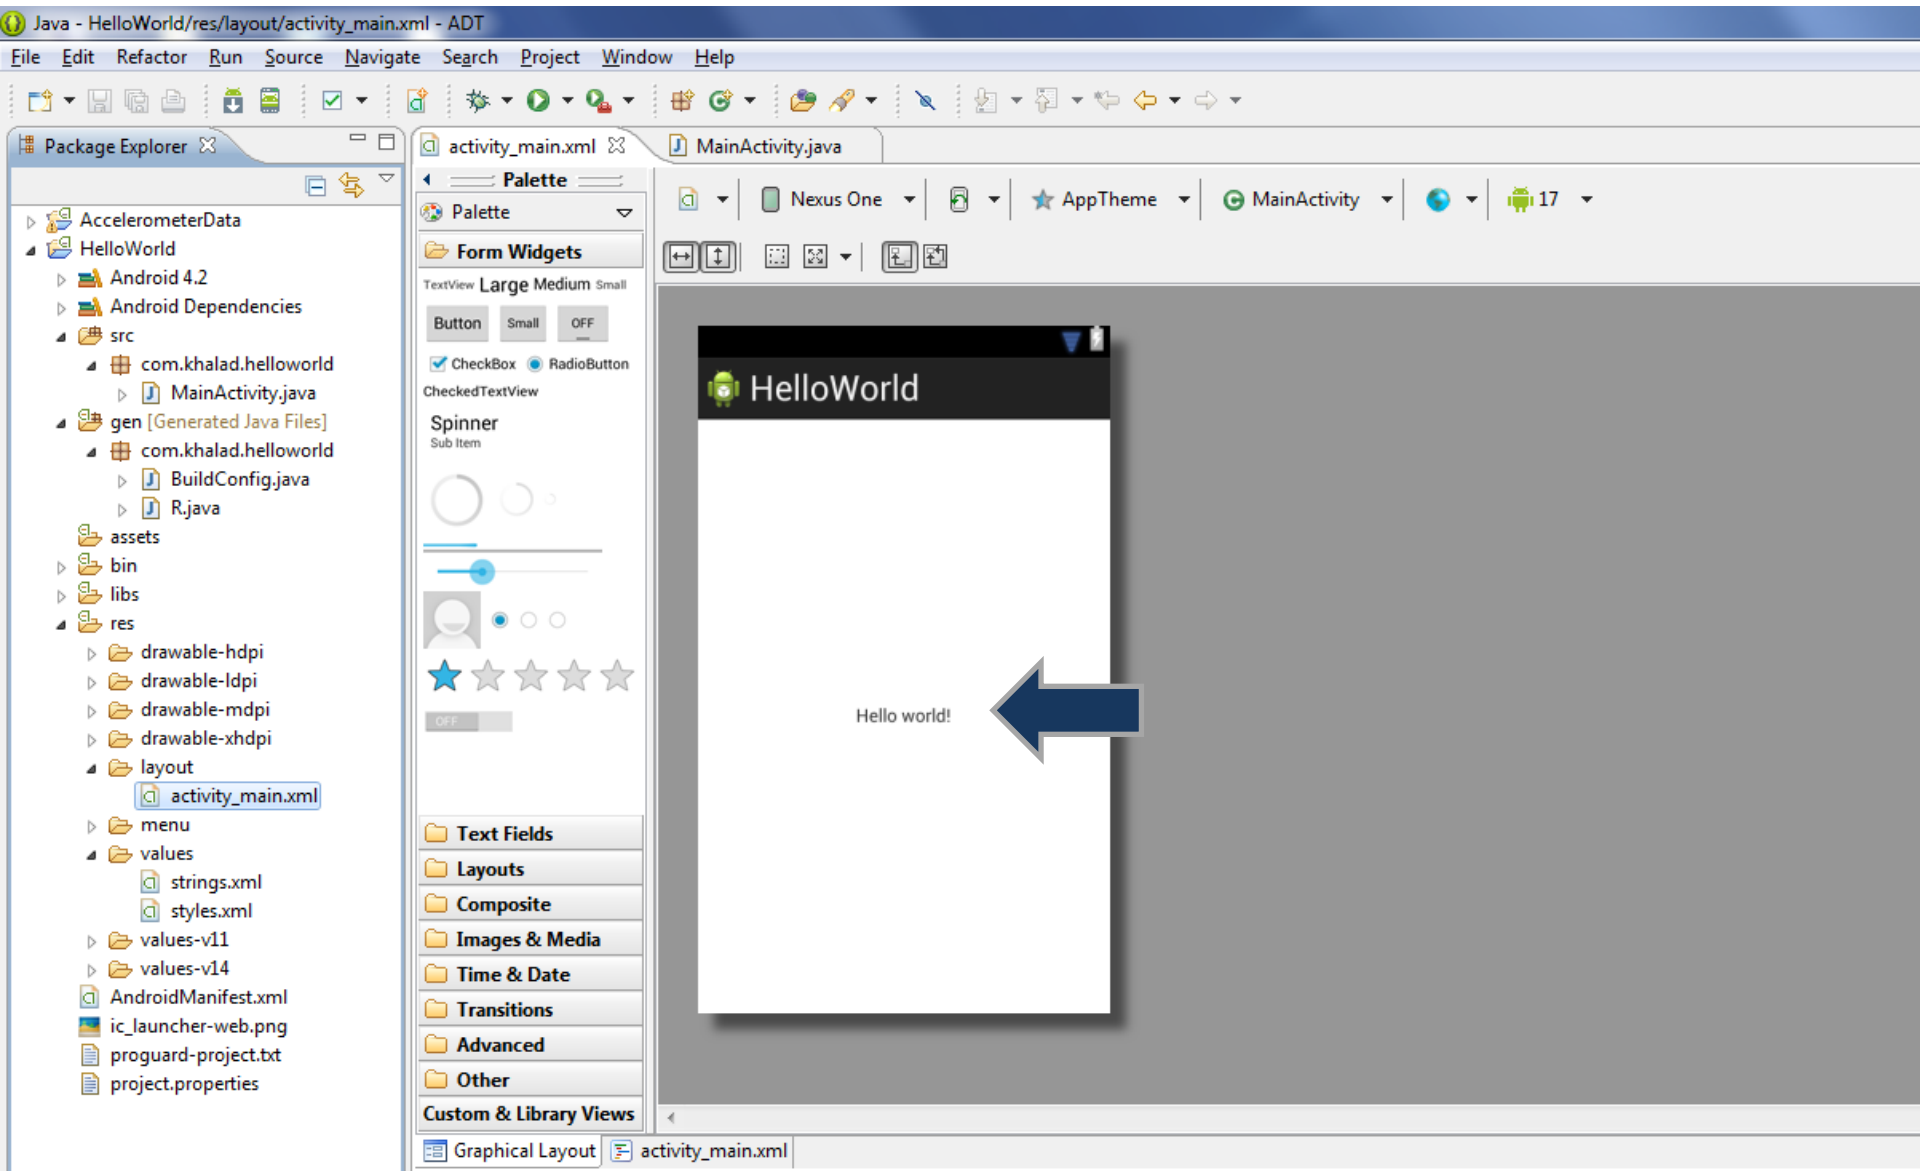

drawable - For bitmap files (PNG, JPEG, or GIF), image files, and XML files that describe Drawable shapes

layout - XML files that are compiled into screen layout

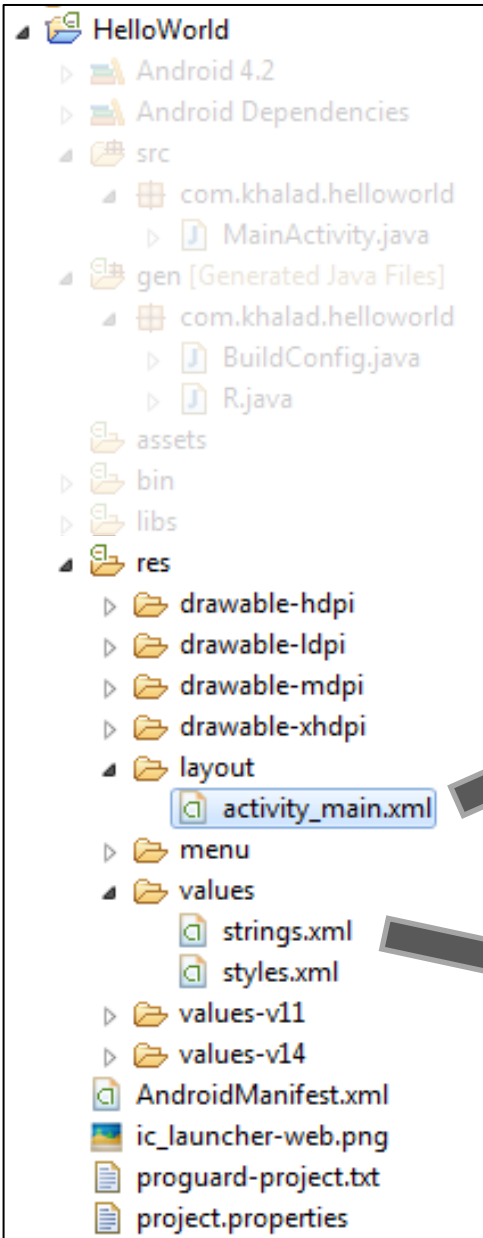

values - XML files that contain simple values, such as strings, integers, and colors

Common Layouts

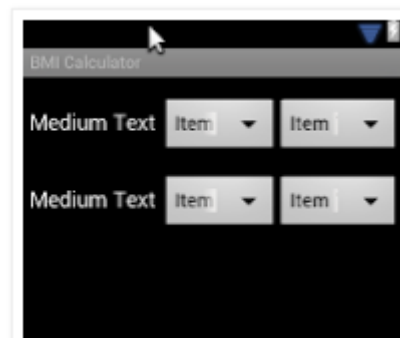

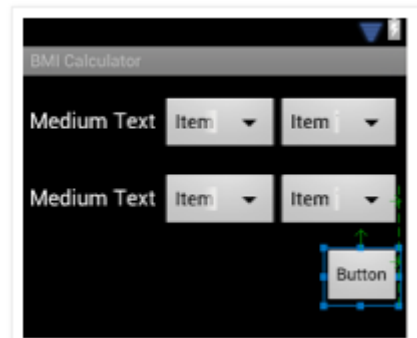

Common Layouts

(Vertical) Linear Layout

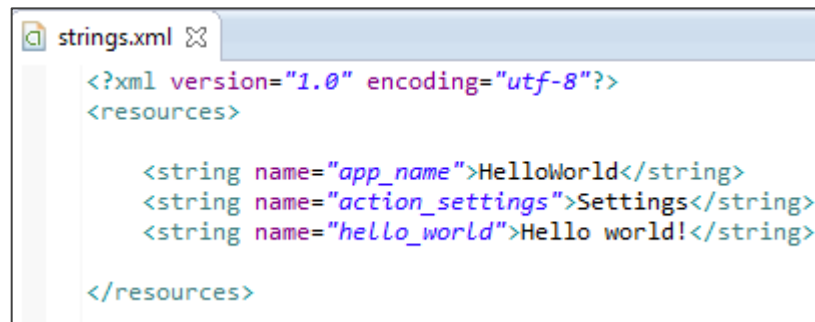

Example of TableLayout (Portrait View)

Example of RelativeLayout

Layouts: <http://developer.android.com/guide/topics/ui/declaring-layout.html#CommonLayouts>

activity_main.xml file

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical" >

    <EditText
        android:id="@+id/editText1" android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:ems="10"
        android:hint="Username" >
    </EditText>

    <EditText
        android:id="@+id/editText2"
        android:layout_width="match_parent" android:layout_height="wrap_content"

Radio Button

Output

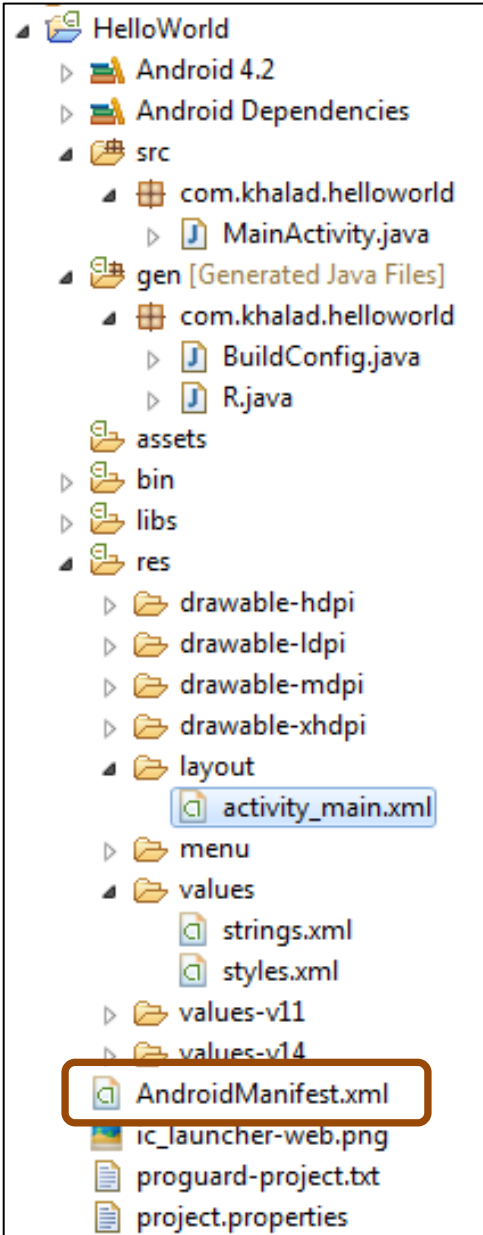

The screenshot displays an Android application interface. At the top, a dark header bar contains a green Android robot icon on the left, the text "HelloWorld" in the center, and a vertical ellipsis menu icon on the right. Below the header, the main content area is white. It features a "Username" label followed by a text input field with a blue underline. Below this is a "Password" label followed by a text input field. A wide, light gray button labeled "Button" is positioned below the password field. At the bottom of the form, the text "Gender" is followed by two radio buttons; the first is selected and labeled "Male", and the second is labeled "Female".

Folder Structure For Android Project

Manifest file: describe the application

- Declare app's name, version, icon, permission, etc...
- Declare the application's components: activity, service ,receiver or provider

```
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    package="com.khalad.helloworld"
    android:versionCode="1"
    android:versionName="1.0" >

    <uses-sdk
        android:minSdkVersion="8"
        android:targetSdkVersion="17" />

    <application
        android:allowBackup="true"
        android:icon="@drawable/ic_launcher"
        android:label="@string/app_name"
        android:theme="@style/AppTheme" >
        <activity
            android:name="com.khalad.helloworld.MainActivity"
            android:label="@string/app_name" >
            <intent-filter>
                <action android:name="android.intent.action.MAIN" />

                <category android:name="android.intent.category.LAUNCHER" />
            </intent-filter>
        </activity>
    </application>

</manifest>
```

Core Components

Activity

- An *activity* is a user interface screen where visual elements (Views or widgets) can be placed
- In this example, there are five widgets (TextView, EditText, AnalogClock and two Buttons)
- An application might consist of just one activity or several

Core Components

Intent, Service

- *Intent* is a mechanism to describe specific action, such a “Send an email”

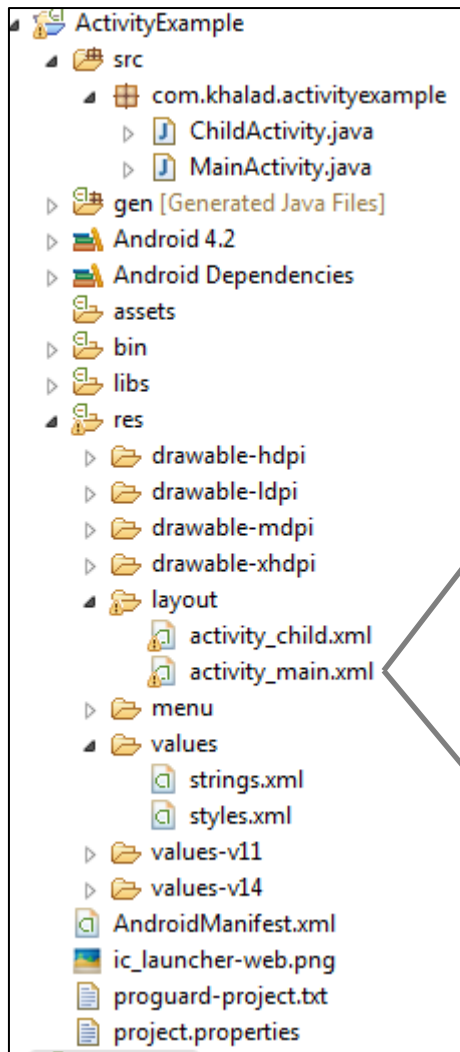

- A *service* is a task that runs in the background without the user's direct interaction

Activity Example

Activity Example

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    android:id="@+id/linearlayout1"
    android:layout_width="fill_parent"
    android:layout_height="fill_parent"
    android:orientation="vertical" >

    <TextView
        android:id="@+id/textView1"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="I&apos;m screen 1 (activity_main.xml)"
        android:textAppearance="?android:attr/textAppearanceLarge" />

    <Button
        android:id="@+id/button1"
        android:layout_width="fill_parent"
        android:layout_height="wrap_content"
        android:text="Click me to another screen" />

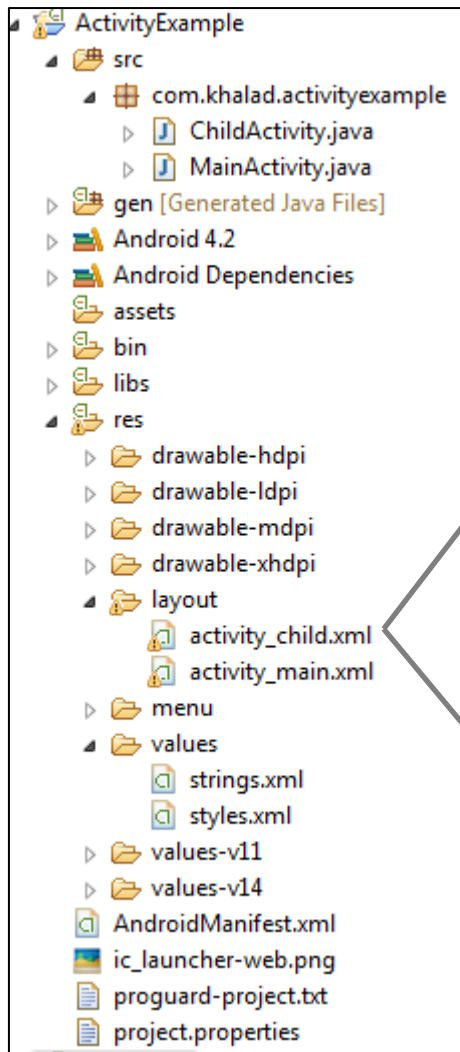

</LinearLayout>
```

Text View

Button

Activity Example

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    android:id="@+id/linearLayout1"
    android:layout_width="fill_parent"
    android:layout_height="fill_parent" >

    <TextView
        android:id="@+id/textView1"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="I'm screen 2 (activity_child.xml)"
        android:textAppearance="?android:attr/textAppearanceLarge" />

</LinearLayout>
```

Text View

Activity Example

```
package com.khalad.activityexample;

import android.app.Activity;

public class MainActivity extends Activity {

    Button button;

    @Override
    public void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
        addListenerOnButton();
    }

    public void addListenerOnButton() {

        final Context context = this;
        button = (Button) findViewById(R.id.button1);
        button.setOnClickListener(new OnClickListener() {

            @Override
            public void onClick(View arg0) {

                Intent intent = new Intent(context, ChildActivity.class);
                startActivity(intent);
            }
        });
    }
}
```

Inherit from the activity class

Set layout as describe in activity_main.xml

Find "button1" and set actions

Activity Example

```
package com.khalad.activityexample;

import android.app.Activity;

public class ChildActivity extends Activity {

    Button button;

    @Override
    public void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_child);
    }

}
```

Set layout as describe
in *activity_child.xml*

Activity Example

```
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    package="com.khalad.activityexample"
    android:versionCode="1"
    android:versionName="1.0" >

    <uses-sdk
        android:minSdkVersion="8"
        android:targetSdkVersion="17" />

    <application
        android:allowBackup="true"
        android:icon="@drawable/ic_launcher"
        android:label="@string/app_name1"
        android:theme="@style/AppTheme" >

        <activity
            android:name="com.khalad.activityexample.MainActivity"
            android:label="@string/app_name1" >
            <intent-filter>
                <action android:name="android.intent.action.MAIN" />
                <category android:name="android.intent.category.LAUNCHER" />
            </intent-filter>
        </activity>

        <activity
            android:label="@string/app_name2"
            android:name="com.khalad.activityexample.ChildActivity" >
        </activity>

    </application>
</manifest>
```

Accelerometer Example

An accelerometer is defined as an instrument for measuring the time rate of change of velocity with respect to magnitude or direction.

7 Text View, 1 Image View

Step 1-> Layout

```
<LinearLayout
xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="fill_parent"
    android:layout_height="fill_parent"
    android:orientation="vertical" >
<TextView
    android:layout_width="fill_parent"
    android:layout_height="wrap_content"
    android:gravity="center"
    android:paddingTop="20dip"
    android:text="Shaker Demo"
    android:textSize="16sp"
    android:textStyle="bold" />
<TableLayout
    android:layout_width="fill_parent"
    android:layout_height="wrap_content"
    android:paddingTop="10dip"
    android:stretchColumns="*" >
<TableRow>
    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:gravity="center"
        android:text="X-Axis"
        android:textSize="14sp" />
    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:gravity="center"
        android:text="Y-Axis"
        android:textSize="14sp" />
    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:gravity="center"
        android:text="Z-Axis"
        android:textSize="14sp" />
</TableRow>
```

```
<TableRow>
    <TextView
        android:id="@+id/x_axis"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:gravity="center" />
    <TextView
        android:id="@+id/y_axis"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:gravity="center" />
    <TextView
        android:id="@+id/z_axis"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:gravity="center" />
</TableRow>
</TableLayout>
<ImageView
    android:id="@+id/image"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_gravity="center"
    android:paddingTop="15dip"
    android:visibility="invisible" />
</LinearLayout>
```

Step 2 -> Java Main File

```
public class MainActivity extends Activity implements SensorEventListener {  
  
    private float mLastX, mLastY, mLastZ;  
    private boolean mInitialized;  
    private SensorManager mSensorManager;  
    private Sensor mAccelerometer;  
    private final float NOISE = (float) 2.0;  
  
    @Override  
    protected void onCreate(Bundle savedInstanceState) {  
        super.onCreate(savedInstanceState);  
        setContentView(R.layout.activity_main);  
  
        mInitialized = false;  
        mSensorManager = (SensorManager) getSystemService(Context.SENSOR_SERVICE);  
        mAccelerometer = mSensorManager.getDefaultSensor(Sensor.TYPE_ACCELEROMETER);  
        mSensorManager.registerListener(this, mAccelerometer, SensorManager.SENSOR_DELAY_NORMAL);  
    }  
}
```

SensorManager → access the device's sensor

Get an instance of this class by calling getSystemService()

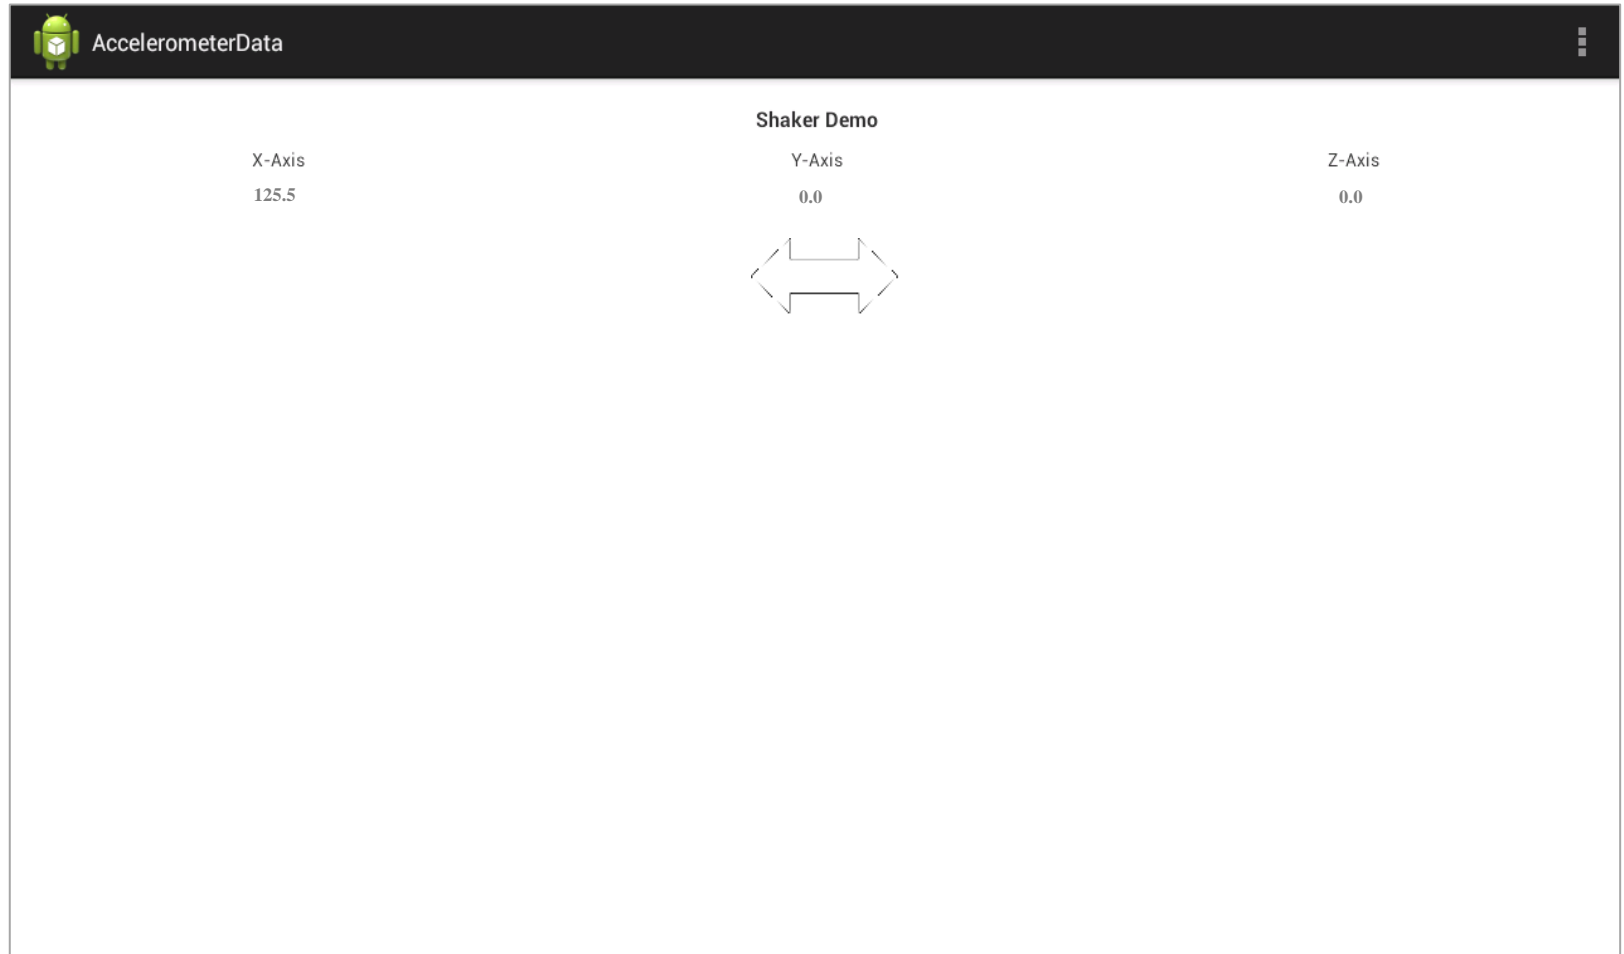

Step 2 -> Java Main File

```
protected void onResume() {  
    super.onResume();  
    mSensorManager.registerListener(this, mAccelerometer, SensorManager.SENSOR_DELAY_NORMAL);  
}  
  
protected void onPause() {  
    super.onPause();  
    mSensorManager.unregisterListener(this);  
}
```

onResume()

onPaues()

Accelerometer Example

Permission

- Manifest update:
 - Add permission

```
<?xml version="1.0" encoding="utf-8"?>  
<manifest xmlns:android="http://schemas.android.com/apk/res/android"  
    //...  
    android:versionName="1.0">
```

```
    <uses-permission  
    android:name="android.permission.WRITE_EXTERNAL_STORAGE" />
```

```
    <uses-sdk android:minSdkVersion="8" />  
    //...
```
